## Study of Social Protection Programs in Agriculture Workers in Sindh, Pakistan: Issues, Challenges, and Way Forward

### **Are Agricultural Workers in Sindh Truly Protected?**

Over 70% of workers find social protection programs ineffective due to corruption and poor implementation. With low wages, health risks, and job insecurity rampant, what's the way forward? Our research unveils key gaps and solutions—targeted awareness, better policies, and gender-inclusive approaches. Join us to explore how we can reform social protection for a more secure future!

## Restoring the Indus Delta: Building Climate Resilience through Mangrove Conservation & Sustainable Livelihoods

The Indus Delta, one of the world's largest delta systems is facing severe degradation due to climate change reduced freshwater flow and deforestation. **Under the BMZ-funded project, WWF-Pakistan has implemented large-scale mangrove restoration, sustainable fisheries and community-driven adaptation initiatives to enhance coastal resilience.** Learn about successful conservation strategies, nature-based solutions (NBS) and community empowerment efforts that are restoring the delta's ecological integrity while ensuring sustainable livelihoods.

# IRD Pakistan

## Community Ownership and Empowerment Initiatives to Strengthen Social Protection in Healthcare Practices

Empowered Communities for Stronger Healthcare. **Join us as we showcase innovative community-driven approaches—leveraging participatory research, the arts, and social networks—to strengthen social protection in healthcare.** Learn about real-world stories from Pakistan where lived experiences shape impactful and sustainable health solutions.

## Noneconomic losses and damages assessment and policy framework for flood prone districts of Sindh

Extreme climate events cause more than just financial losses—psychological trauma, social displacement, and environmental degradation remain underexplored. **Our research assesses noneconomic losses in Pakistan's flood-prone areas and proposes a Disaster Risk Management (DRM) framework to guide relief and rehabilitation efforts.** Join us to explore how inclusive policies and integrated strategies can better support vulnerable communities and mitigate future risks. Let's rethink disaster response for a resilient future!

## Innovation using technology and measurement

Innovation in technology and measurement is transforming how we approach research, evaluation, and decision-making. **RADS explores how real-time data collection, spatial analytics, and adaptive visualization techniques can enhance the accuracy and impact of social protection research.** By integrating tools like geo-located population estimates, interactive dashboards, and multi-dataset triangulation, we move beyond static reports to dynamic, actionable insights. We delve into the latest advancements in public health evaluations, econometric techniques, and data-driven program assessments, demonstrating how technology can bridge gaps, optimize resources, and drive evidence-based solutions for complex challenges in social protection and other sectors.
